Hiring Team
Monzo Bank
London, United Kingdom

Re: Backend Engineer III — Monzo

Dear Hiring Team,

I am writing to express my strong interest in the **Backend Engineer III** position at Monzo. As a recent Computer Science graduate with professional full-stack development experience and a deep passion for building products that genuinely improve people's lives, Monzo's mission to make money work for everyone resonates with me both as an engineer and as a customer. I am excited by the opportunity to contribute to a team that ships real impact at scale.

During my time as a **Web Developer at Orange Technolab**, I spent over a year building and maintaining production web applications end-to-end. I designed and integrated RESTful APIs, optimised codebases for performance and maintainability, and delivered projects within agile sprint cycles alongside cross-functional teams of designers, product managers, and fellow engineers. This experience taught me how to write clean, reliable code under real-world constraints and collaborate effectively to ship features on time.

For my dissertation, I built **SmartDine** — a full-stack AI-enhanced restaurant management platform using Django, React, PostgreSQL, and Docker. I integrated machine learning models for demand forecasting and sales prediction, implemented JWT authentication with role-based access control, and containerised the entire system for consistent deployment. This project gave me strong experience in designing distributed backend systems, working with databases at a meaningful scale, and making architectural decisions that balance performance with maintainability — skills I understand are central to engineering at Monzo.

More recently, I developed an **AI-powered portfolio website** using Next.js, TypeScript, and Tailwind CSS, featuring an embedded chatbot powered by the Groq API and Llama 3.3 70B. I engineered a dynamic system prompt architecture, built secure server-side API routes to protect credentials, and designed a responsive chat interface with markdown rendering. This project reflects my initiative to explore emerging technologies and build polished, user-facing products independently.

I appreciate that Monzo values a **product mindset** and hires in a technically agnostic way. While I am proficient in Python, JavaScript/TypeScript, and SQL, I am confident in my ability to pick up Go and Monzo's technology stack quickly — my track record of learning new frameworks and delivering working systems in short timeframes speaks to that adaptability. I am genuinely motivated by building things that customers rely on every day, and I am eager to bring that energy to one of Monzo's engineering collectives.

I would welcome the opportunity to discuss how my experience and enthusiasm align with what you are looking for in a Backend Engineer III. Thank you for your time and consideration — I look forward to hearing from you.

Yours sincerely,

Aniruddh Prajapati
